-	0	Lotus.as. and 'In computer applications involving entry of numerical data or mixed numbers and text, such as order taking, financial analysis, inventory taking, and recording customer information, a computer program or system known as a "spreadsheet" is often used. In a computer spreadsheet system, words and numbers are arranged in a two dimensional grid of "cells" arranged in horizontal rows and vertical columns. Cells of prior art spreadsheet systems can contain either text, numerical values, or arithmetic formulas that define the content of a cell in terms of the content of certain specified other cells. An important feature of spreadsheet systems is their ability to automatically recalculate all cell values when the values of one or more related cells are changed'.bi.
